

# Industrial Flooring Systems

Floors that work hard for  
your company.

A company that works  
hard for you.

## Go with the experts. Go with Sherwin-Williams!

At Sherwin-Williams, we have products to meet your flooring needs and the people to exceed your expectations for service and satisfaction.

We offer a wide range of flooring systems for virtually any industrial application — from warehouses to parking decks to food service operations. Each of which is designed to minimize your downtime while giving you the performance you demand.

And with every Sherwin-Williams product comes expert advice and service that is second to none. Our knowledgeable flooring professionals will be there for you to answer your questions, assess your needs, and recommend a flooring system that meets your individual requirements. And certified contractors will make sure the installation is done right.

If you have a question regarding local and federal environmental compliance regulations, ASTM standards and recommended trade and association practices, our technical field representatives can help. Backed by a team of Corrosion Specification Specialists (accredited by NACE International), our reps have the in-depth answers you're looking for.

In other words, when you specify a flooring system from Sherwin-Williams, you're not just getting a floor, you're getting the whole company.

### TPM® Seamless Epoxy Floors For added strength.

Harder and more durable than concrete, TPM seamless epoxy floors can withstand aggressive wear, impact and thermal shock conditions.

These trowel-applied, heavy-duty industrial floors can also be tailored to meet your requirements regarding traffic patterns, texture and color. Your Sherwin-Williams representative will assist you in creating the right specification for your project.

### EPO-FLEX® Industrial Floor Systems For high-impact applications.

Incorporating an internally flexible epoxy, EPO-FLEX Industrial Systems provide superior abrasion, thermal shock resistance and flexibility for high-impact industrial flooring applications. The textured broadcast surface yields a finish that is durable and slip-resistant.

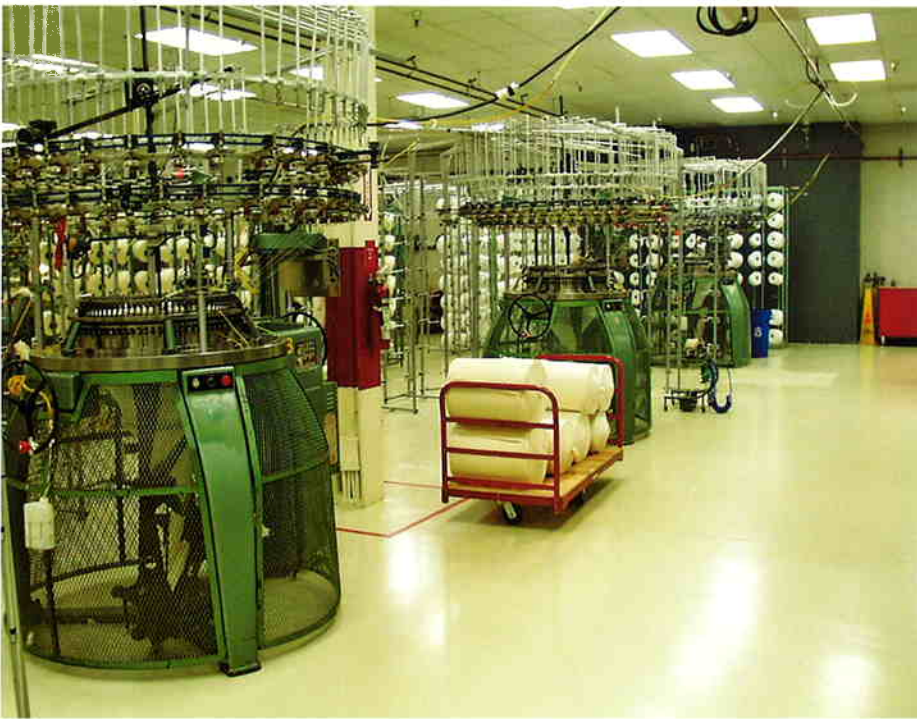

## FASTOP™ Flooring Systems Upgrade your floor without the costly downtime.

FasTop flooring systems are designed for fast installation, quick return to service and long lasting performance. FasTop's state-of-the-art chemical formula allows it to cure rapidly with excellent chemical resistance and is moisture tolerant during and after installation. The coefficient of thermal expansion is compatible with concrete, so steam cleaning and rapid thermal cycling will not cause delamination.

FasTop flooring systems help you maintain your facility to USDA, FDA and your own safety standards. Whether you have new concrete, deteriorated acid brick or concrete that's simply worn out, our certified contractors can prepare the substrate and install a new seamless FasTop system that will improve the safety, productivity and functionality of your facility.

## TRAFFICOTE™ Self-Leveling Industrial Floors For moderate traffic applications.

Trafficote self-leveling industrial floors provide superior protection for moderate service conditions — especially aisles. Trafficote systems are available in skid-inhibiting or smooth finishes.

## Coatings for light to moderate traffic.

We offer high build coatings that will improve aesthetics, provide slip resistance, are durable and give you an easy-to-clean surface. Applied in one or two coats over a primer, these systems are ideal for warehouses and storage areas.

## Waterproofing for a variety of applications.

Sherwin-Williams makes a wide range of urethane and epoxy-based liquid-applied membrane coatings with surface finishes to meet your slip resistance and decorative requirements. Which means whether you need to waterproof a parking deck, mechanical equipment room or a sump area, we have the right system for you.

Sherwin-Williams is your one source for interior and exterior paints and coatings. With our extensive product line and distribution, we can supply all your plants around the country — no matter what surface you want to coat. Call us, and let us show you how we can keep your facilities looking good and performing great.
